Projects

- "Auschooltation" web-application

  Web-app with implemented authorization system for medical students and tutors based on Django, PostgreSQL and Bootstrap on the frontend. The app is designed to teach students identify auscultation sounds (heart and breath diseases) correctly. App consists of theoretical lessons and quizzes for knowledge testing. Profile page shows student's progress (percentage of correct answers).

- Student Management System

  Web-app with implemented authorization system for students, administration and stuff which allows to store the data, edit, and add all members of the university. Control the absence of the staff and students, assign the classes to the students and teachers, communicate via internal message and send notifications. Sed on Django and MySQL with some Bootstrap on the frontend.

Awards Received

- Outstanding performance with Auschooltation project in Youth contest of research and innovation projects (2020)

- The winner of BSUIR scientific projects contest (2020)

Education

Belarusian State University of Informatics and Radioelectronics (2018 - now)

Universitat Politècnica de València (02.2021 – 09.2021)

Specialty: Business & Administration
Qualification: marketing
GPA: 8.6

Summary

I am a fourth year BSUIR student. I've been interested in computer technologies since childhood. One day I used HTML and CSS with JavaScript to create my first website and it has inspired me to dive into programming and perspective fields of computer science. Currently, I am highly motivated to start my career path as Frontend Developer and help your team grow.
